Claim The ultimate windproof thermal midlayer

Reality I have to ride a lot in the winter in leathers and I've always struggled finding thermal windproof base-layers that allow flexibility and don't make you sweat too much. These have windproof panels sewn into the parts that matter and are stretchy elsewhere, meaning it is easy to move around in leathers and that the fit is perfect too. I'm very, very impressed – you can wear leathers when the temperature is struggling above freezing and they're breathable once you start cracking on.

Worth the money? In my opinion, this is the best winter kit you can get. **Matt**
